WORK EXPERIENCE

Frontend web developer

XisLabs

12/2023 - Present

Achievements/Tasks

- Leveraged self-taught expertise to independently create and develop projects from start to finish, showcasing the ability to learn and innovate autonomously.
- Seamlessly integrated APIs into frontend designs, enhancing functionality and creating dynamic, data-driven experiences.
- Crafted custom frontend components to ensure reusability and modularity, empowering teams with efficient development practices.
- Teamed up with backend developers and designers to craft pixel-perfect interfaces, ensuring seamless harmony between frontend and backend realms.
- Skillfully contributed to sprint planning and timely submissions, keeping projects on track and delivering results within deadlines.
- Used version control effectively to manage codebase and implement bug fixes

PROJECTS

JEFF

- An e-commerce website built with technologies like Next.js, Typescript, Redux Toolkit, Formik, i18next, Material UI and apex charts.
- Worked on user, seller and admin side to implement CRUD operations along with searching, sorting and pagination.
- Created custom components and also used 3rd party libraries to customize certain components like calendar and charts ,etc.
- Maintained English and Korean translation files with the help of i18n for switching languages between English and Korean.
- Worked closely with backend developers and designers to bring maximum output within limited time boundaries.

TAMAM

- A business process management platform which helps companies streamline their processes, including form creation, dispatching, and report generation.
- It is built with technologies like React.js, Typescript, Redux, Bootstrap.
- Worked on companies side to create complex ui along with implementing filters based on selected date, form, report, user and status.
- Created custom table and charts component showing results based on the applied filters in analytics portion and created loading skeleton component for charts while there is loading.
- Customized the reports pdf by using js pdf autotable library and implemented html2Canvas library to take screenshot of the charts and append above the table of reports in the pdf.
- Created Control panel for Tamam from scratch where I implemented authentication, Companies listing and filtering and all forms, users , reports, subscriptions and sites modules of the selected company.
- Created custom multi select component for applying filters based on subscription plan, subscription status, country and seats and applied sorting and searching on table along with column hiding.

Personal Portfolio website

- A Next.js built clean and optimized website showcasing my personal projects, expertise and achievements apart from industrial experience. Every project include details about technologies that are used and their links to Github repo and live demo

EDUCATION

BSCS

Virtual University Of Pakistan

05/2022 - Present
